

Live Webinar - Introduction to Engineering & Engineering Inspection

Duration: 3 hours

Maximum 10 delegates

Engineering insurance and inspection is probably something you have heard of or know a little about. This course aims to increase that knowledge by giving you a greater understanding of what engineering insurance will cover and the extent of cover available, We will also look at what is important to the underwriter, the many pieces of legislation relating to engineering equipment and why engineering inspection often comes as part of the insurance package.

Who this course is aimed at

This course will benefit those who are new to commercial insurance as well as those who have worked with in the insurance industry for a time and wish to know more about the subject. It will be most helpful to those who will be presenting engineering insurance as part of their portfolio of insurance classes.

Course Objectives

- To better understand the need for engineering cover
- To gain an understanding of the cover available and what an engineering policy will typically cover
- To better know the types of industries that may need engineering cover and inspection
- To recognise what is required by health and safety statute and regulation
- Better identify when engineering risks appear and how best to approach the client's needs

What this course will cover:

1. What is engineering insurance
2. What engineering insurance typically covers
3. The extent of cover available
4. Engineering inspection
5. Underwriter rating factors
